Holo (HOT)

About : Holo is a cloud hosting market for distributed applications powered by Holochain. Holo is a distributed peer-to-peer hosting platform for Holochain apps (hApps); a bridge to the new Internet.

Holo does to web hosting what Airbnb did to hotels—anyone can become a host by turning their computer into a source of revenue, getting paid in Holo fuel for hosting distributed applications. The Holo software runs in the background, allocating spare storage and processing power to serve hApps to the legacy web. Hosts choose what hApps to serve, set their own hosting prices, and manage their own priorities.

Advantages :

1) **Versatile Solutions :** Decentralization with no bottlenecks and adaptable validation.

2) **Peer-to-peer :** No centralized servers, no ledgers, and no middlemen.

3) **Agent-centric :** Individual authority over data sharing, access, and storage.

4) **Low-cost, lightweight, secure :** Every application runs its own holochain on its own terms, with cheaper hosting overhead. Since users are hosts, as

more agents use an app, more hosting power and storage becomes available. The load gets lighter!
