

Insight Chain (INB)

About :

Insight Chain, a decentralized research ecosystem chain based on blockchain, will focus on data ecosystem on the blockchain domain firstly, works on building Wall Street-like financial order in the blockchain domain. It integrates companies, media, analyst and investor with blockchain technology, co-constructs a decentralized platform integrating information sharing, review & index, data trading and interaction based on research to promote the upgrade and healthy development of the blockchain industry.

Advantages :

- 1) Data Research :** By Insight Chain, analyst can make research on crypto-currency companies, media and investor. Research data will be saved on the blockchain to keep data reliable and

traceable. As well, all the participated will be rewarded with token.

2) Information Sharing : Insight Chain can help blockchain company to build management concept and provide a platform for them to disclosure information which will establish a decentralized information sharing platform for company, media, analyst and investor.

3) Review & Index : Based on data research, analyst can review crypto-currency and crypto-currency fund from multiple dimensions to provide guidance for investor. Meanwhile, the platform can offer a series of indexes like Insight 500 and RONI which can be referred by rating and investment.

4) Data Trading : Insight Chain will establish a decentralized data trading platform based on blockchain technology. On this platform, analyst, investor, company and media can trade on data, ratings, indexes and reports point-to-point.

5) Interactive & Consultation : Through Insight Chain, analyst can give real-time recommendation on investment strategies to

investor, also all participants can engage in forum, chatting, live and questioning and answering interaction.

Roadmap :

Q1 2018 : Prepare the POC of production and complete the development of Minimum Viable Product.

Q2 2018 : The β -version will be tested and released. The decentralized trade is realized based on Ethereum.

Q4 2018 : Complete the systematic ecology: required functions of information sharing, interactive consultation, evaluation index and data trading.

Q1 2019 : Complete the test and development of public blockchain.

Q2 2019 : All data like trading, research, review and index will be saved on the public blockchain.

Q4 2019 : Build the concept of review and index in Insight Chain and become the industrial standard.
