

MaidSafeCoin (MAID)

About :

MaidSafe, builders of the SAFE Network, are a small team of: thinkers, inventors, tinkerers, engineers and designers started by Scottish engineer David Irvine in 2006.

The SAFE (Secure Access For Everyone) Network is a new secure way to access apps that value the security of your data above all else. Downloading the free SAFE software will provide access to: messaging, apps, email, social networks, data storage, video conferencing, and much more.

Rather than using data centres and servers which are prone to data theft and surveillance, as is common on today's Internet, the SAFE Network uses advanced peer-to-peer technology that joins together the spare computing capacity of all SAFE users, creating a global network.

The SAFE Network is made up of the unused hard drive space, processing power and data connection of its users.

By providing your unused computing resources to SAFE, you will be paid in a network token called Safecoin.

Advantages :

- 1) Decentralised & Autonomous :** An autonomous network that runs itself, distributed across the globe, that can't be shut down, controlled, or censored.
- 2) Total Privacy, Absolute Security :** The SAFE Network encrypts all data by default, automatically splitting it into many pieces which constantly move to locations around the globe that cannot be traced. And your access to them is untraceable too.
- 3) Complete Control of Your Data :** The SAFE Network turns the current data ownership model on its head. Self Authentication gives you complete control over your data. Grant revocable permission for apps to use that data and prevent any unauthorised company or third party ever gaining access.
- 4) Pay Once to Upload, Store Forever :** Upload your data and have it stored securely forever. Get free, unrestricted access from any connected device around the world. You'll pay a minimal, one-time, upload charge but you'll get permanent secure backups with no more monthly fees.

Goal : A desire to provide security and privacy for everyone on the planet.
