

Polymath (POLY)

About :

Polymath enables trillions of dollars of securities to migrate to the blockchain.

Polymath simplifies the legal process of creating and selling security tokens. It makes a new token standard, the ST20, and enforces government compliance. Only a "list of authorized investors and their Ethereum wallet addresses" can hold ST20 tokens. Therefore, token issuers don't need to worry about the legal implications of their security falling into the wrong hands.

Advantages :

- 1) Programmable Equity :** Polymath enables companies to take control of their equity issuance through programmable code.

2) Raise in Cryptocurrency : Raising in cryptocurrency opens up an entire wealth of new investors.

3) 24/7 Access to Markets : No matter where you live in the world, you have access to trading 24/7.

4) Elimination of Middlemen : Polymath eliminates the middleman and financial structures that hinder the deployment of equity.

5) Access to 2 Billion Unbanked : There is a trove of wealth that is untouched by Wall Street that can now be accessed through Polymath.
