

## **Revain (R)**

### **About :**

It's a new generation feedback platform, mostly based on the blockchain technology that doesn't allow to change or delete reviews and its authors get a reward for creating it!

The platform runs on two tokens: R and RVN. Users are paid in RVN which is a stable currency used only within the platform, and R is the external token which is used for exchange and trade. A non-linear conversion mechanism is used to convert RVN to R and vice versa.

### **Advantages :**

- 1) Artificial intelligence :** Our service is developed in close collaboration with hi-tech IBM AI systems.
- 2) Stable token :** RVN token, inner platform currency, isn't volatile at all.

- 3) **Review's immutability** : Due to blockchain technology and Ethereum platform especially, all the reviews can't be deleted or changed.
- 4) **Rewards** : Users get a reward in our tokens for every review. The only requirement - the review should pass filtration stage.
- 5) **Automatic filtration** : We're using machine learning and neural networks for detecting all types of unwarranted texts: spam, flood, abuse, etc.
- 6) **Unbiased system** : We're creating a system that doesn't need a user to trust a platform to perform any actions. DAO and smart-contracts will defend it from any kinds of fake reviews.
- 7) **Transparency** : Anyone can check all the reviews or transactions. Also, we have public Github page so that you can explore our code!  
<https://github.com/Revain>
- 8) **Quality feedback** : Improve your product and business processes by getting a real experience of hundreds of your users.
