

Stratis (STRAT)

About :

Stratis is a blockchain development platform for enterprise businesses to easily create applications on specific, private blockchains. The Stratis API framework enables organizations to speed up their blockchain creation and simplify the development process involved with it.

Advantages :

- 1) Secure and Tested :** The Stratis Full Node combines the proven security consensus of Bitcoin with the latest advancements in blockchain technology.
- 2) Decentralized :** Every Full Node executes its own block validation based on the consensus protocol of the Stratis blockchain.
- 3) Privacy :** Encryption allows transactions to remain secure and anonymous throughout the network of Stratis Full Nodes.
- 4) Accessible :** The Stratis Full Node is open source so anyone with internet access can download a copy and run a Stratis Full Node.

- 5) **Scalable** : The technology behind Stratis Sidechains unlocks the full potential of the blockchain by allowing solutions to scale as adoption increases.
- 6) **Practical** : Smart contracts enable digitally-enforced commitments between blockchain participants, which breaks the reliance on third parties.
- 7) **Cutting Edge** : The addition of Stratis Sidechains and C# smart contracts make the Stratis Platform suitable for use-cases at the forefront of our industry.
- 8) **Reliable** : Support and deep insights from a large community of C# and .NET developers makes the codebase reliable and easily auditable.

Goal : To use our expertise to solve the challenges of enterprise blockchain development and implementation on a global scale – we make blockchain easy!
