

## **Veritaseum (VERI)**

### **About :**

Veritaseum builds blockchain-based, peer-to-peer capital markets as software on a global scale. It enable the seamless connection of parties and assets without the need for a third or authoritarian interest.

Any entity with internet access can participate in these capital markets on a peer-to-peer and one-on-one basis.

Using VERI, the platform's utility token, users can purchase access rights to the smart contracts that manage the platform's services.

### **Advantages :**

Veritaseum is a highly disruptive revolution in finance, investment and value. It uses blockchain technology, smart contracts and distributed

computing to aid industries and entities suffering from high economic rents, undue friction and gross inefficiencies.

At it's simplest, Veritaseum is the gateway to peer-to-peer capital markets. It allows any two or more individuals to deal directly with each other in transactions of value without reliance on centralized or authoritative third parties. They can do this without concern for typical legacy credit or counter-party risk.
