

Waves (WAVES)

About :

The Waves Platform is a global public blockchain platform, founded in 2016.

WAVES is a decentralized blockchain platform focusing on custom blockchain tokens operations. National currencies transfer is maintained on the WAVES blockchain through compliant gateway operators.

Technology : Waves's blockchain uses a Proof-of-stake (PoS) algorithm, with participants being rewarded from the commission on transactions made.

Advantages :

1) Low, fixed transaction fees : The minimum fee for the transfer of funds is 0.001 WAVES. The fixed fee for market orders

is 0.003 WAVES. The price of releasing a token is 1 WAVES, and you do not pay to use your own token.

2) Low-level support for various transactions : You don't need smart contracts to release tokens or for leasing and making deals on the decentralised exchange, because transactions are performed natively.

3) Unbeatable speed and throughput : Based on the Waves-NG protocol, our system supports up to 6,000 transactions per minute, leaving other blockchains far behind.

4) Versatile functionality for any use case : We are building simple, scalable, reliable and robust tools to perform secure and transparent business operations on the Waves blockchain.

5) Developer-friendly API : Our open source client application uses the same API. You can explore it and implement any kind of client application yourself.

Goal : Waves Platform's mission is to reinvent the DNA of entrepreneurship around the world by providing a shared infrastructure, offering easy-to-use, highly functional tools to make blockchain available to every person or organisation that can benefit from it.
