

aelf (ELF)

About :

Aelf is a Decentralized cloud computing blockchain network.

The Aelf team is focused on two main innovations in their search to solve the problems with existing blockchain technology. The first is the creation and use of side chains, and the second is the creation of a new and unique governance system.

Advantages :

- 1. High Performance :** Full nodes run on cloud servers
- 2. Resource Segregation :** Each smart contract runs on its own Blockchain

3. Governance & Development : Token holders ensure governance and allow developers to customize it to meet their own needs
