Enjin Coin (ENJ)

About :

Founded in 2009 and based in Singapore, Enjin is an information technology company with multiple products. Enjin Network, Enjin Wallet, EnjinX, Efinity and Enjin Coin (ENJ).

Empower your userbase with true ownership, prevent fraud, increase your revenue and explore the blockchain gaming frontier.

Our modular platform enables you to explore endless use-cases for blockchain technology. Integrate blockchain in a matter of hours, without writing a single line of code - or go all in and create custom tokens & contracts from scratch.

Enjin offers a completely flexible, free platform for creating, integrating and scaling tokenized gaming assets.

Advantages :

- **Non-Fungible Tokens :** Use the ERC-1155 token standard to mint unique gaming assets - rare cards, scarce weapons & mighty heroes.

- **Fungible Tokens :** Forge in-game currencies, virtual goods, gold coins, cards, generic loot items, mineable resources and other abundant gaming assets.

- **Modular :** Use everything from bound tokens & whitelists to trading fees & token bundles to supercharge your token & game mechanics - and increase your revenue.

- **Mint & Melt :** Back your tokens with ENJ and provide the ultimate value proposition for your audience - true ownership of meltable gaming assets that have real-world value.

- **Integrate :** Use our easy to use SDKs to integrate blockchain with your game. Use pre-built Token Supply models or code your own smart contracts.

- **Scale :** Take advantage of Efinity, our sidechain instant token scaling network to build everything from CCGss, Dapps to massive, MMO gaming multiverses.

Goal : Our mission is to bring fairness and purpose to gaming.
